READ THIS FIRST

These instructions are intended for qualified technical personnel. Prior commencing with any activities ...

- you must carefully read and understand this manual and
- you must follow the instructions given therein.

The ESCON Module 50/8 is considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and is intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Therefore, you must not put the device into service, ...

- unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- unless the other machinery fulfills all relevant health and safety aspects!
- unless all respective interfaces have been established and fulfill the herein stated requirements!

1 About

1.1 About this Document

1.1.1 Intended Purpose

The purpose of the present document is to familiarize you with the ESCON Module 50/8 Servo Controller. It will highlight the tasks for safe and adequate installation and/or commissioning. Follow the described instructions ...

- to avoid dangerous situations,
- to keep installation and/or commissioning time at a minimum,
- to increase reliability and service life of the described equipment.

The document contains performance data and specifications, information on fulfilled standards, details on connections and pin assignment, and wiring examples. In addition, the document also includes a Motherboard Design Guide and detailed information on the optionally available «ESCON Module 50/8 Motherboard».

1.1.2 Target Audience

The present document is intended for trained and skilled personnel. It conveys information on how to understand and fulfill the respective work and duties.

1.1.3 How to use

Take note of the following notations and codes which will be used throughout the document.

Notation	Meaning
(n)	refers to an item (such as order number, list item, etc.)
→	denotes “see”, “see also”, “take note of” or “go to”

Table 1-1 Notation used

1.1.4 Symbols & signs

In the course of the present document, the following symbols and signs will be used.

Type	Symbol	Meaning	
Safety Alert	 (typical)	DANGER	Indicates an imminent hazardous situation . If not avoided, it will result in death or serious injury .
		WARNING	Indicates a potential hazardous situation . If not avoided, it may result in death or serious injury .
		CAUTION	Indicates a probably hazardous situation or calls the attention to unsafe practices. If not avoided, it may result in injury .
Prohibited Action	 (typical)	Indicates a dangerous action. Hence, you must not!	
Mandatory Action	 (typical)	Indicates a mandatory action. Hence, you must!	
Information		Requirement / Note / Remark	Indicates an activity you must perform prior to continuing, or gives information on a particular item you need to observe.
		Best Practice	Indicates advice or a recommendation on the easiest and best way to proceed.
		Material Damage	Indicates instructions on how to prevent damage to the equipment.

Table 1-2 Symbols & Signs

1.1.5 Trademarks and Brand Names

For easier legibility, registered brand names are listed below and will not be further tagged with their respective trademark. It must be understood that the brands (the list below is not necessarily concluding) are protected by copyright and/or other intellectual property rights even if their legal trademarks are omitted in the later course of this document.

Brand Name	Trademark Owner
Certonal®	© Acota Limited, GB-Shrewsbury
Littelfuse® SMD NANO2®	© Littelfuse, USA-Chicago, IL
Windows®	© Microsoft Corporation, USA-Redmond, WA

1.2 About the Device

The ESCON Module 50/8 is a small-sized, powerful 4-quadrant PWM servo controller for the highly efficient control of permanent magnet-activated brushed DC motors or brushless EC motors up to approximately 400 Watts. The servo controller has been specifically designed for use in harsh environments and features a Certonal FC-742 protective coating.

The servo controller is available in two variants – as «ESCON Module 50/8 HE» (586137) with heat sink and as «ESCON Module 50/8» (532872) without heat sink. Latter is designed for the use with a suitable, individually selectable heat sink. Thereby, we strongly suggest to employ the maxon accessory «ESCON Module 50/8 Thermal Pad» (586142).

The featured operating modes – speed control (closed loop), speed control (open loop), and current control – meet the highest requirements. The ESCON Module 50/8 is designed being commanded by an analog set value and features extensive analog and digital I/O functionality.

The miniaturized OEM plug-in module can be seamlessly integrated in complex customer applications. A suitable motherboard is available for the initial commissioning.

The device is designed to be configured via USB interface using the graphical user interface «ESCON Studio» for Windows PCs.

You can download the latest ESCON software version (as well as the latest edition of the documentation) from the Internet under → <http://escon.maxongroup.com>.

1.3 About the Safety Precautions

- Make sure that you have read and understood the note “READ THIS FIRST” on page A-2!
- Do not engage in any work unless you possess the stated skills (→chapter “1.1.2 Target Audience” on page 1-3)!
- Refer to →chapter “1.1.4 Symbols & signs” on page 1-4 for explanations of the symbols used in the following!
- You must observe any regulation applicable in the country and/or at the site of implementation with regard to health and safety/accident prevention and/or environmental protection!

DANGER

High Voltage and/or Electrical Shock

Touching live wires causes death or serious injuries!

- *Consider any power cable as connected to live power, unless having proven the opposite!*
- *Make sure that neither end of cable is connected to live power!*
- *Make sure that power source cannot be engaged while work is in process!*
- *Obey lock-out/tag-out procedures!*
- *Make sure to securely lock any power engaging equipment against unintentional engagement and tag it with your name!*

Requirements

- *Make sure that all associated devices and components are installed according to local regulations.*
- *Be aware that, by principle, an electronic apparatus can not be considered fail-safe. Therefore, you must make sure that any machine/apparatus has been fitted with independent monitoring and safety equipment. If the machine/apparatus should break down, if it is operated incorrectly, if the control unit breaks down or if the cables break or get disconnected, etc., the complete drive system must return – and be kept – in a safe operating mode.*
- *Be aware that you are not entitled to perform any repair on components supplied by maxon.*

Electrostatic Sensitive Device (ESD)

- *Make sure to wear working cloth in compliance with ESD.*
- *Handle device with extra care.*

2 Specifications

2.1 Technical Data

ESCON Module 50/8 (532872) ESCON Module 50/8 HE (586137)		
Electrical Rating	Nominal operating voltage $+V_{CC}$	10...50 VDC
	Absolute operating voltage $+V_{CC\ min}/+V_{CC\ max}$	8 VDC/56 VDC
	Output voltage (max.)	$0.98 \times +V_{CC}$
	Output current I_{cont}/I_{max} (<20 s)	8 A/15 A
	Pulse width modulation frequency	53.6 kHz
	Sampling rate of PI current controller	53.6 kHz
	Sampling rate of PI speed controller	5.36 kHz
	Max. efficiency	99%
	Max. speed of DC motor	limited by max. permissible speed (motor) and max. output voltage (controller)
	Max. speed EC motor	150,000 rpm (1 pole pair)
	Built-in motor choke	–
Inputs & Outputs	Analog input 1 Analog input 2	12-bit resolution; –10...+10 V; differential
	Analog output 1 Analog output 2	12-bit resolution ; –4...+4 V; referenced to GND
	Digital input 1 Digital input 2	+2.4...+36 VDC ($R_i = 38.5\ k\Omega$)
	Digital input/output 3 Digital input/output 4	+2.4...+36 VDC ($R_i = 38.5\ k\Omega$)/max. 36 VDC ($I_L < 500\ mA$)
	Hall sensor signals	H1, H2, H3
	Encoder signals	A, A\, B, B\, (max. 1 MHz)
Voltage Outputs	Auxiliary output voltage	+5 VDC ($I_L \leq 10\ mA$)
	Hall sensor supply voltage	+5 VDC ($I_L \leq 30\ mA$)
	Encoder supply voltage	+5 VDC ($I_L \leq 70\ mA$)
Motor Connections	DC motor	+ Motor, – Motor
	EC motor	Motor winding 1, Motor winding 2, Motor winding 3
Interface	USB 2.0 / USB 3.0	full speed
Status Indicators	Operation	green LED
	Error	red LED

ESCON Module 50/8 (532872) ESCON Module 50/8 HE (586137)			
Physical	Weight	Module 50/8	approx. 16 g
		Module 50/8 HE	approx. 84 g
	Dimensions (L x W x H)	Module 50/8	53.3 x 37.5 x 14.5 mm
		Module 50/8 HE	53.3 x 37.5 x 30.6 mm
Connection	Plugs into socket headers with 2.54 mm pitch and M2.5 threaded bolt		
Environmental Conditions ^{*1)}	Temperature	Operation	Module 50/8: -40...+45 °C Module 50/8 HE: -40...+65 °C
		Extended range ^{*1)}	Module 50/8: +45...+85 °C Module 50/8 HE: +65...+92 °C Derating → Figure 2-1
		Storage	-40...+85 °C
	Altitude ^{*2)}	Operation	0...6'000 m MSL
		Extended range ^{*1)}	6'000...10'000 m MSL Derating: Ambient temperature (→ Figure 2-2) less 11 °C
	Humidity	5...90% (condensation not permitted)	

*1) Operation within the extended range (temperature and altitude) is permitted. For this purpose, however, the adjustment of ambient temperature and power dissipation (and for the ESCON Module 50/8 also a possibly necessary heat sink) must be observed.

*2) Operating altitude in meters above Mean Sea Level, MSL.

Table 2-4 Technical Data

2.2 Thermal Data

2.2.1 Power Dissipation and Efficiency

The servo controller is available in two variants – as «ESCON Module 50/8 HE» (586137) with heat sink and as «ESCON Module 50/8» (532872) without heat sink.

The two following graphs can be used to determine the application limits for output current and ambient temperature for different supply voltages.

If you are using an ESCON Module 50/8 and want to fully utilize the extended temperature, you will need to provide a suitable heat sink. From the following graphs you can see the maximum heat resistance R_{th} of a corresponding heat sink at a known power dissipation P_D . Take also note of →chapter “2.2.2 Application Example: Determining a suitable Heat Sink” on page 2-10.

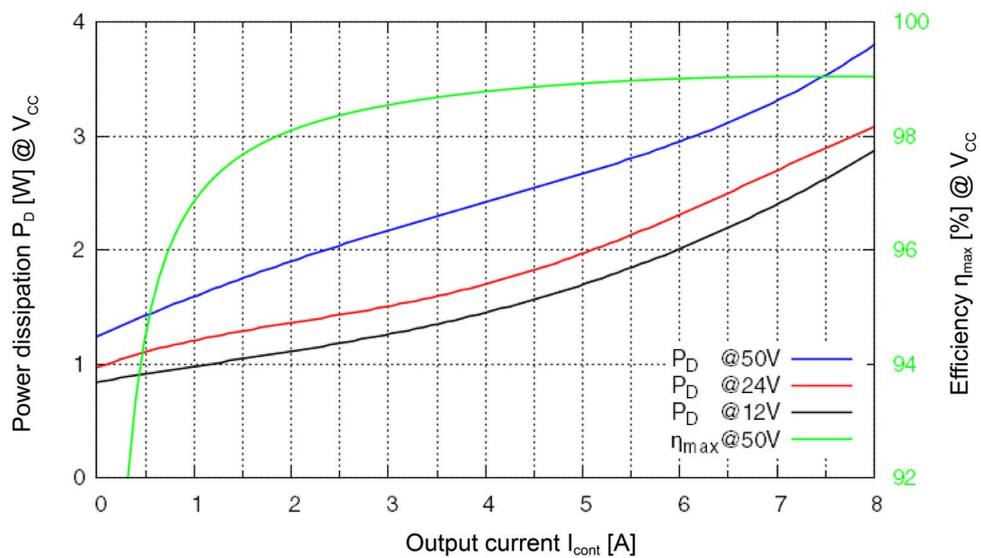

Figure 2-1 Power Dissipation and Efficiency

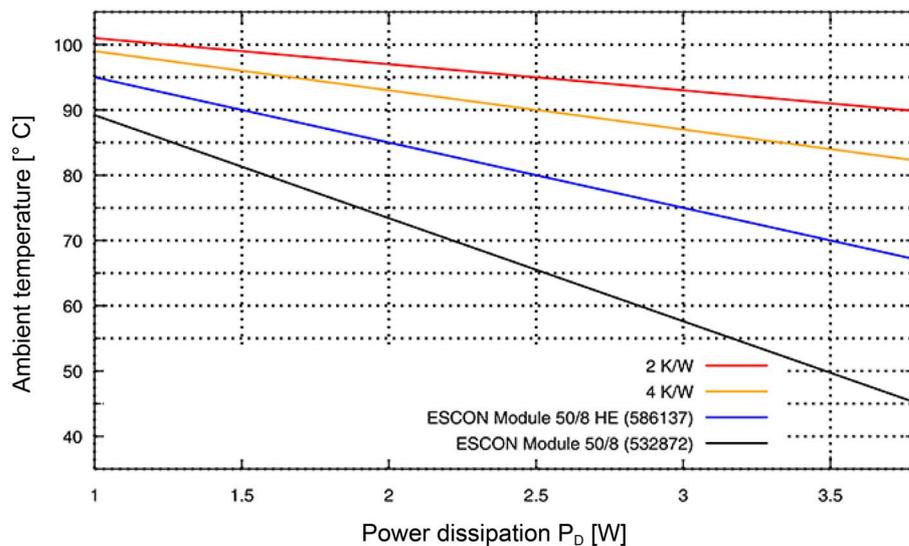

Figure 2-2 Derating Ambient Temperature / required Heat Sink

2.2.2 Application Example: Determining a suitable Heat Sink

To choose a suitable heat sink you will need to determine the maximum heat resistance R_{th} . Retrieve the values of above figures as follows:

1) Assumption

The ESCON Module 50/8 (532872) shall be operated at a nominal operating voltage $+V_{CC}$ of 24 V and an output current I_{cont} of 8 A.

2) →Figure 2-1

At the intersection of the red characteristic (24 V) and 8 A output current (X-axis), a power dissipation of 3.2 W results on the Y-axis.

3) →Figure 2-2

The black characteristic (ESCON Module 50/8) reveals that operation with a power dissipation of 3.2 W (X-axis) is possible without heat sink up to a maximum ambient temperature of approx. 55 °C (Y-axis).

Under the same conditions, however, for operation at a maximum ambient temperature of 85 °C (Y-axis) a heat sink with a maximum heat resistance R_{th} of less than 4 K/W is required (yellow characteristic).

Use the maxon accessory «ESCON Module 50/8 Thermal Pad» (586142) for optimum heat transfer and observe the manufacturer's specifications for the respective heat sink.

Specification / Accessories			
ESCON Module 50/8 Heat Sink *3)	Dimensions	53.3 x 37.5 x 16.5 mm (L x B x H)	(586141)
	Heat resistance R_{th}	5.8 K/W	
	Mounting	4 threads for M2.5 screws	
	Material	Aluminum, black anodized	
ESCON Module 50/8 Thermal Pad *3)	Dimensions	40 x 25 x 4 mm (L x B x H)	(586142)
*3) Corresponds to the components used in ESCON Module 50/8 HE (586137)			

Table 2-5 Heat Sink – Specification & Accessories

2.3 Limitations

Protection functionality	Switch-off threshold	Recovery threshold
Undervoltage	7.2 V	7.4 V
Overvoltage	58 V	55 V
Overcurrent	22.5 A	—
Thermal overload	105 °C	90 °C

2.5 Standards

The described device has been successfully tested for compliance with the below listed standards. In practical terms, only the complete system (the fully operational equipment comprising all individual components, such as motor, servo controller, power supply unit, EMC filter, cabling etc.) can undergo an EMC test to ensure interference-free operation.

Important Notice

The device's compliance with the mentioned standards does not imply its compliance within the final, ready to operate setup. In order to achieve compliance of your operational system, you must perform EMC testing of the involved equipment as a whole.

Electromagnetic compatibility		
Generic standards	IEC/EN 61000-6-2	Immunity for industrial environments
	IEC/EN 61000-6-3	Emission standard for residential, commercial and light-industrial environments
Applied standards	IEC/EN 61000-6-3 IEC/EN 55022 (CISPR22)	Radio disturbance characteristics/radio interference
	IEC/EN 61000-4-3	Radiated, radio-frequency, electromagnetic field immunity test >10 V/m
	IEC/EN 61000-4-4	Electrical fast transient/burst immunity test ±2 kV
	IEC/EN 61000-4-6	Immunity to conducted disturbances, induced by radio-frequency fields 10 Vrms
Others		
Environmental standards	IEC/EN 60068-2-6	Environmental testing – Test Fc: Vibration (sinusoidal, 10...500 Hz, 20 m/s ²)
	MIL-STD-810F	Random transport (10...500 Hz up to 2.53 g _{rms})
Safety standards	UL File Number E108467; unassembled printed circuit board	
Reliability	MIL-HDBK-217F	Reliability prediction of electronic equipment Environment: Ground, benign (GB) Ambient temperature: 298 K (25 °C) Component stress: In accordance with circuit diagram and nominal power Mean Time Between Failures (MTBF) <ul style="list-style-type: none"> • ESCON Module 50/8: 380'195 hours • ESCON Module 50/8 HE: 517'288 hours

Table 2-7 Standards

3 Setup

IMPORTANT NOTICE: PREREQUISITES FOR PERMISSION TO COMMENCE INSTALLATION

The **ESCON Module 50/8** is considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and **is intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.**

WARNING

Risk of Injury

Operating the device without the full compliance of the surrounding system with EU Directive 2006/42/EC may cause serious injuries!

- Do not operate the device, unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- Do not operate the device, unless the other machinery fulfills all relevant health and safety aspects!
- Do not operate the device, unless all respective interfaces have been established and fulfill the requirements stated in this document!

3.1 Generally applicable Rules

Maximal permitted Supply Voltage

- Make sure that operating voltage is between 10...50 VDC.
- Supply voltages above 56 VDC, or wrong polarity will destroy the unit.
- Note that the necessary output current is depending on the load torque. Yet, the output current limits of the ESCON Module 50/8 are as follows; continuous max. 8 A / short-time (acceleration) max. 15 A.

Hot plugging the USB Interface may cause Hardware Damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high differences in potential of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

3.2 Configuration of Power Supply

Basically, any power supply may be used, provided it meets the minimal requirements stated below.

Power Supply Requirements	
Output voltage	+V _{CC} 10...50 VDC
Absolute output voltage	min. 8 VDC; max. 56 VDC
Output current	Depending on load <ul style="list-style-type: none"> • continuous max. 8 A • short-time (acceleration, <20 s) max. 15 A

- 1) Use the formula below to calculate the required voltage under load.
- 2) Choose a power supply according to the calculated voltage. Thereby consider:
 - a) During braking of the load, the power supply must be capable of buffering the recovered kinetic energy (for example, in a capacitor).
 - b) If you are using an electronically stabilized power supply, make sure that the overcurrent protection circuit is configured inoperative within the operating range.

Note

The formula already takes the following into account:

- Maximum PWM duty cycle of 98%
- Controller's max. voltage drop of 1 V @ 8 A

KNOWN VALUES:

- Operating torque M [mNm]
- Operating speed n [rpm]
- Nominal motor voltage U_N [Volt]
- Motor no-load speed at U_N, n₀ [rpm]
- Speed/torque gradient of the motor Δn/ΔM [rpm/mNm]

SOUGHT VALUE:

- Supply voltage +V_{CC} [Volt]

SOLUTION:

$$V_{CC} \geq \left[\frac{U_N}{n_0} \cdot \left(n + \frac{\Delta n}{\Delta M} \cdot M \right) \cdot \frac{1}{0.98} \right] + 1 [V]$$

3.3 Connections

The actual connection will depend on the overall configuration of your drive system and the type of motor you will be using.

Follow the description in the given order and choose the wiring diagram that best suits the components you are using. For corresponding wiring diagrams → Chapter “4 Wiring” on page 4-27.

3.3.1 Pin Assignment

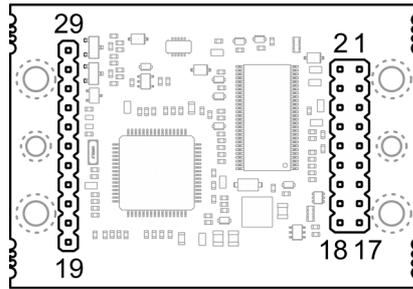

Figure 3-5 Pin Assignment

Pin	Signal	Description
1/2	Motor (+M) Motor winding 1	DC motor: Motor + EC motor: Winding 1

29	AnIN1+	Analog input 1, positive signal

Table 3-9 Pin Assignment (Pins 19-29)

3.3.2 Hall Sensor

Hall sensor supply voltage	+5 VDC
Max. Hall sensor supply current	30 mA
Input voltage	0...24 VDC
Max. input voltage	+24 VDC
Logic 0	typically <1.0 V
Logic 1	typically >2.4 V
Internal pull-up resistor	10 k Ω (referenced to +5.45 V)

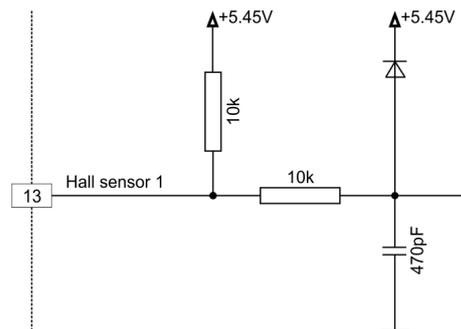

Figure 3-7 Hall Sensor 1 Input Circuit (analogously valid also for Hall Sensors 2 & 3)

3.3.3 Encoder

Best practice

- Differential signals offer good resistance against electrical interference. Therefore we **recommend using a differential scheme**. Nevertheless, the controller supports both schemes – differential and single-ended (unsymmetrical).
- The controller does not require an index impulse (Ch I, Ch IV).
- For best performance, **we strongly recommend using encoders with a line driver**. Otherwise, speed limitations may apply due to slow switching edges.

Differential	
Min. differential input voltage	±200 mV
Max. input voltage	+12 VDC/–12 VDC
Line receiver (internal)	EIA RS422 standard
Max. input frequency	1 MHz

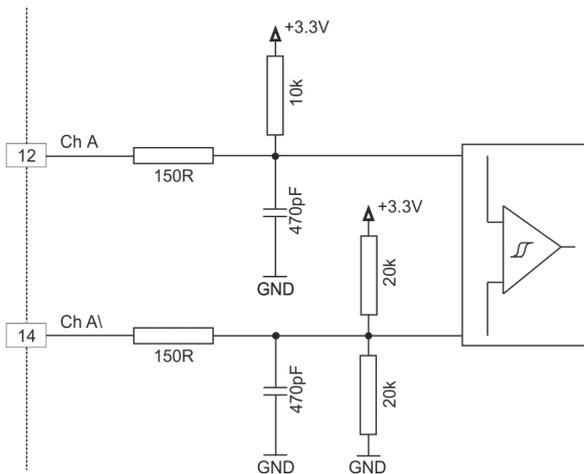

Figure 3-8 Encoder Input Circuit Ch A “Differential” (analogously valid also for Ch B)

Single-ended	
Input voltage	0...5 VDC
Max. input voltage	+12 VDC/-12 VDC
Logic 0	<1.0 V
Logic 1	>2.4 V
Input high current	I_{IH} = typically +420 μ A @ 5 V
Input low current	I_{IL} = typically -170 μ A @ 0 V
Max. input frequency	100 kHz

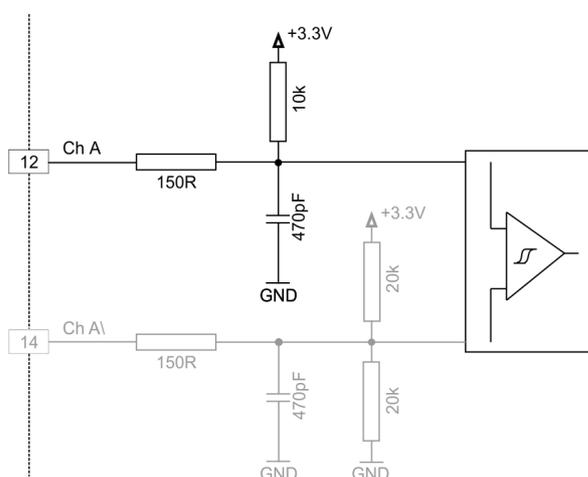

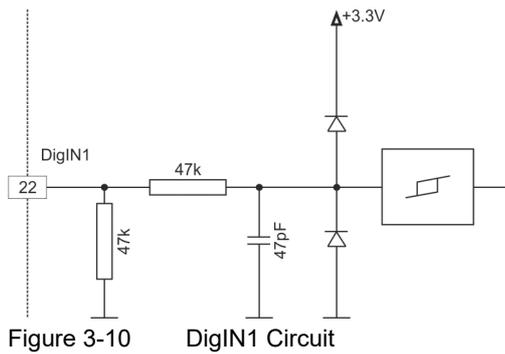

Figure 3-9 Encoder Input Circuit Ch A “Single-ended” (analogously valid also for Ch B)

3.3.4 Digital I/Os

3.3.4.1 Digital Input 1

Input voltage	0...36 VDC
Max. input voltage	+36 VDC/-36 VDC
Logic 0	typically <1.0 V
Logic 1	typically >2.4 V
Input resistance	typically 47 k Ω (<3.3 V) typically 38.5 k Ω (@ 5 V) typically 25.5 k Ω (@ 24 V)
Input current at logic 1	typically 130 μ A @ +5 VDC
Switching delay	<8 ms

PWM frequency range	10 Hz...5 kHz
PWM duty cycle range (resolution)	10...90% (0.1%)
RC Servo cycle duration	3...30 ms
RC Servo pulse length	1...2 ms

3.3.4.2 Digital Input 2

Input voltage	0...36 VDC
Max. input voltage	+36 VDC/-36 VDC
Logic 0	typically <1.0 V
Logic 1	typically >2.4 V
Input resistance	typically 47 kΩ (<3.3 V) typically 38.5 kΩ (@ 5 V) typically 25.5 kΩ (@ 24 V)
Input current at logic 1	typically 130 μA @ +5 VDC
Switching delay	<8 ms

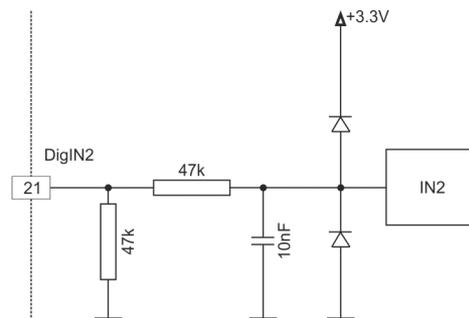

Figure 3-11 DigIN2 Circuit

3.3.4.3 Digital Inputs/Outputs 3 and 4

DigIN	
Input voltage	0...36 VDC
Max. input voltage	+36 VDC
Logic 0	typically <1.0 V
Logic 1	typically >2.4 V
Input resistance	typically 47 kΩ (<3.3 V) typically 38.5 kΩ (@ 5 V) typically 25.5 kΩ (@ 24 V)
Input current at logic 1	typically 130 μA @ +5 VDC
Switching delay	<8 ms

3.3.5 Analog I/Os

3.3.5.1 Analog Inputs 1 and 2

Input voltage	-10...+10 VDC (differential)
Max. input voltage	+24 VDC/-24 VDC
Common mode voltage	-5...+10 VDC (referenced to GND)
Input resistance	80 k Ω (differential) 65 k Ω (referenced to GND)
A/D converter	12-bit
Resolution	5.64 mV
Bandwidth	10 kHz

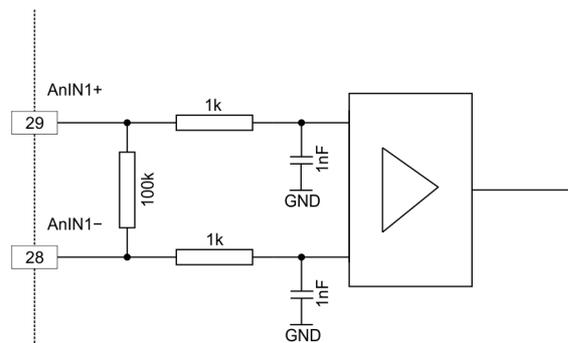

Figure 3-15 AnIN1 Circuit (analogously valid also for AnIN2)

3.3.5.2 Analog Outputs 1 and 2

Output voltage	-4...+4 VDC
D/A converter	12-bit
Resolution	2.42 mV
Refresh rate	AnOUT1: 26.8 kHz AnOUT2: 5.4 kHz
Analog bandwidth of output amplifier	50 kHz
Max. capacitive load	300 nF Note: The rate of the increase is limited in proportion to the capacitive load (e.g. 5 V/ms @300 nF).
Max. output current limit	1 mA

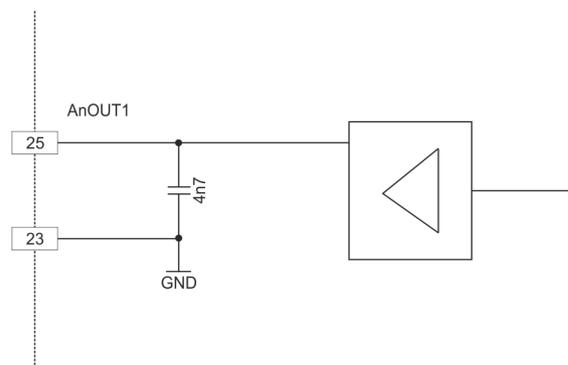

Figure 3-16 AnOUT1 Circuit (analogously valid also for AnOUT2)

3.3.6 USB (J7)

Hot plugging the USB Interface may cause Hardware Damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high differences in potential of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

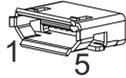

Figure 3-17 USB Socket J7

Note

Column “Head B” (→Table 3-10) refers to USB terminals of your PC.

J7 & Head A Pin	Head B Pin	Signal	Description
1	1	V _{BUS}	USB BUS supply voltage input +5 VDC

5 Motherboard Design Guide

The following provides helpful information on integrating the ESCON Module 50/8 on a printed circuit board. The «Motherboard Design Guide» contains recommendations for the layout of the motherboard and specifies external components that may be required, pin assignments, and connection examples.

CAUTION

Dangerous Action

Errors in implementing the Design can result in serious Injury!

- *Only proceed if you are skilled in electronics design!*
- *Designing a printed circuit board requires special skills and knowledge and may only be performed by experienced electronic developers!*
- *This quick guide is only intended as an aid, does not make any claim to completeness, and will not automatically result in a functional component!*

Bring in additional Support:

*If you are not trained in the design and development of printed circuit boards, you will need additional support for this point.
maxon will be happy to provide you with a quote for designing and manufacturing a motherboard for your specific application.*

5.1 Requirements for Components of Third-party Suppliers

5.1.1 Socket Headers

The ESCON Module 50/8's implementation with pin headers permits mounting in two different ways. The module can either be plugged onto a socket header (→ Table 5-13) or be directly soldered to a printed circuit board.

5.1.2 Supply Voltage

To protect the ESCON Module 50/8, we recommend using an external circuit breaker, a TVS diode, and a capacitor in the voltage supply cable. In this regard, please note the following recommendations:

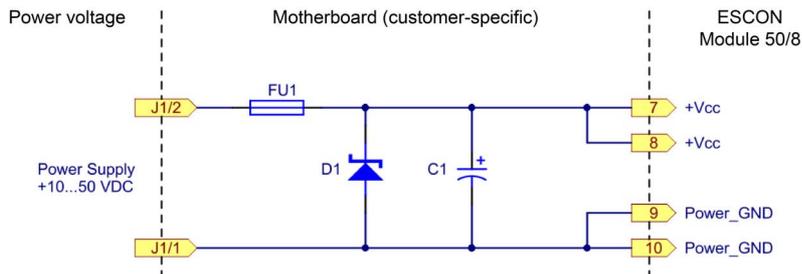

Figure 5-25 Wiring of Voltage Supply Cable

INPUT FUSE (FU1)

An input fuse (FU1) is necessary in order to provide reverse polarity protection. Together with an unipolar TVS diode (D1), this prevents current from flowing in the wrong direction.

TVS DIODE (D1)

To protect against overvoltage resulting from voltage transients or brake energy feedback, we recommend connecting a TVS (transient voltage suppressor) diode (D1) to the voltage supply cable.

CAPACITOR (C1)

The function of the ESCON Module 50/8 does not necessarily require the use of an external capacitor (C1). To further reduce voltage ripple and feedback currents, an electrolytic capacitor can be connected to the voltage supply cable.

5.1.3 Motor Cables/Motor Chokes

The ESCON Module 50/8 is not equipped with internal motor chokes. The majority of motors and applications do not require additional chokes. However, in the case of high supply voltage with very low terminal inductance, the ripple of the motor current can reach an unacceptably high value. This causes the motor to heat up unnecessarily and causes instable control behavior. The minimum terminal inductance required per phase can be calculated using the following formula:

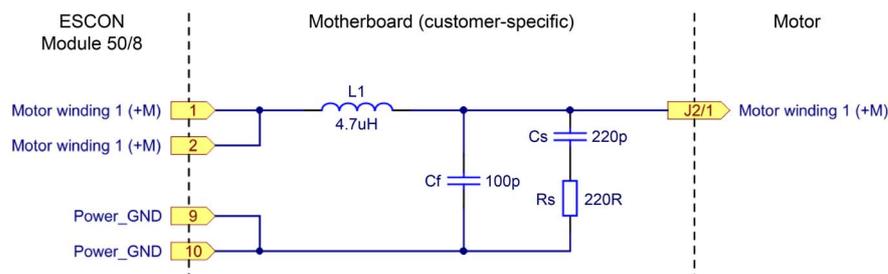

$$L_{phase} \geq \frac{1}{2} \cdot \left(\frac{V_{cc}}{6 \cdot f_{PWM} \cdot I_N} - (0.3 \cdot L_{motor}) \right)$$

- $L_{phase}[H]$ Additional external inductance per phase
- $V_{cc}[V]$ Operating voltage +V_{CC}
- $f_{PWM}[Hz]$ Switching frequency of the power stage = 53 600 Hz
- $I_N[A]$ Nominal current of the motor (→line 6 in the maxon catalog)
- $L_{motor}[H]$ Terminal inductance of the motor (→line 11 in the maxon catalog)

If the result of the calculation is negative, no additional chokes are necessary. Nevertheless, the use of chokes in combination with additional filter components can be useful to reduce the emission of electromagnetic interference.

An additional choke must feature electromagnetic shielding, a high saturation current, minimal losses, and a nominal current greater than the continuous current of the motor. The below wiring examples refer to additional inductances of 4.7 μH and 22 μH. If a different additional inductance is required, also the filter components must be adapted accordingly. Should you need further help with the filter design, contact maxon Support at →<http://support.maxongroup.com>.

5.1.4 Recommended Components and Manufacturers

Recommended components	
Socket Header	Straight socket header, pluggable with 0.64 x 0.64 mm pin headers, 2.54 mm pitch, contact material: gold
	9 poles, 2 rows Samtec (SSW-109-01-L-D) Samtec (SSW-109-01-G-D)
	11 poles, 1 row Samtec (SSW-111-01-L-S) Samtec (SSW-111-01-G-S)
FU1 Fuse	Littelfuse 157 series, fuse holder incl. SMD NANO2 Fuse 10 A very fast-acting, 26.46 A ² sec (0157010.DR)
TVS Diode D1	<ul style="list-style-type: none"> Vishay (SMBJ54A) $U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.3 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$ Diotec (P6SMBJ54A) $U_R = 54 \text{ V}$, $U_{BR} = 60.0 \dots 66.6 \text{ V @ } 1 \text{ mA}$, $U_C = 87.1 \text{ V @ } 6.9 \text{ A}$
Capacitor C1	<ul style="list-style-type: none"> Panasonic (EEUF1J221S) Rated voltage 63 V, capacitance 220 μF, ripple current 1285 mA Rubycon (63ZL220M10X23) Rated voltage 63 V, capacitance 220 μF, ripple current 1120 mA Nichicon (UPM1J221MHD) Rated voltage 63 V, capacitance 220 μF, ripple current 1300 mA
Motor Cable Motor Choke	<p>4.7 μH</p> <ul style="list-style-type: none"> Würth Elektronik WE-PD-XXL (7447709004) $L_N = 4.7 \mu\text{H}$, $R_{DC} = 7.0 \text{ m}\Omega$, $I_{DC} = 9.3 \text{ A}$, $I_{sat} = 13 \text{ A}$, shielded Coiltronics / Eaton (DR127-4R7-R) $L_N = 4.7 \mu\text{H}$, $R_{DC} = 9.2 \text{ m}\Omega$, $I_{DC} = 8.25 \text{ A}$, $I_{sat} = 16.5 \text{ A}$, shielded <p>22 μH</p> <ul style="list-style-type: none"> Bourns (SRP1770TA-220) $L_N = 22 \mu\text{H}$, $R_{DC} = 25.1 \text{ m}\Omega$, $I_{DC} = 12 \text{ A}$, $I_{sat} = 18 \text{ A}$, shielded
Motor Filter	<p>Example 1</p> <ul style="list-style-type: none"> Motor choke L1 4.7 μH Filter capacitor Cf 100 pF; 100 V Snubber capacitor Cs 220 pF; 100 V Snubber resistor Rs 220 R; 0.25 W <p>Example 2</p> <ul style="list-style-type: none"> Motor choke L1 22 μH Filter capacitor Cf 150 pF; 100 V Snubber capacitor Cs 330 pF; 100 V Snubber resistor Rs 390 R; 0.125 W

Table 5-13 Motherboard Design Guide – Recommended Components

5.2 Design Guidelines

The following instructions are intended to serve as an aid for designing an application-specific motherboard and ensuring the correct and reliable integration of the ESCON Module 50/8.

5.2.1 Ground

All ground connections (GND) should be internally connected to the ESCON Module 50/8 (equal potential). It is customary to equip the motherboard with a ground plane. All ground connections should be connected to the voltage supply ground via wide conductive tracks.

Pin	Signal	Description
9	Power_GND GND	Ground of operating voltage Ground
10	Power_GND GND	Ground of operating voltage Ground
23	GND	Ground

Table 5-14 Motherboard Design Guide – Grounding

If an earth potential is in place or required, the ground plane should be connected to the earth potential via one or more capacitors. The use of ceramic capacitors with 100 nF and 100 V is recommended.

5.2.2 Layout

Guidelines for the layout of the motherboard:

- Connector pins [7] and [8] +V_{CC} operating voltage:
The pins should be connected to the fuse via wide conductive tracks.
- Connector pins [9], [10] and [23] ground:
All pins should be connected with the ground of the operating voltage via wide conductive tracks.
- The width of the conductive track and the copper coating thickness for supply voltage and motor depend on the current required for the application. A minimum width of 150 mil is recommended for the track and a minimum thickness of 35 μm for the copper coating.

5.3 THT Footprint

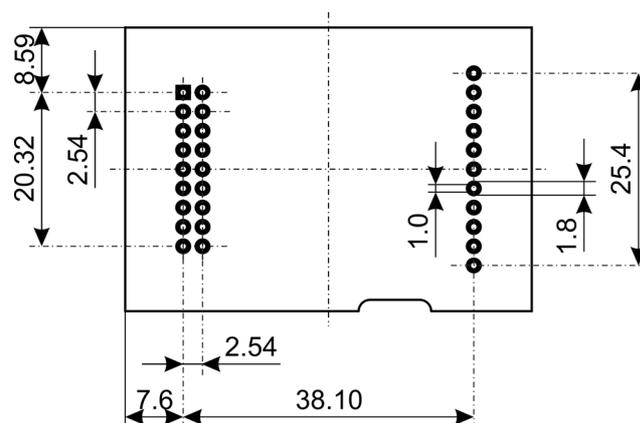

Figure 5-27 THT Footprint [mm] – View from above

5.4 Pin Assignment

For detailed specifications →chapter “3.3 Connections” on page 3-15.

5.5 Technical Data

For detailed specifications →chapter “2 Specifications” on page 2-7.

5.6 Dimensional Drawing

For the dimensional drawing →Figure 2-3 on page 2-11.

5.7 ESCON Module 50/8 Motherboard (586048)

As an alternative to the development of a motherboard the «ESCON Module 50/8 Motherboard» (subsequently named ESCON Module 50/8 MoBo) is available. All required connections are already in place and designed as screw-type terminals.

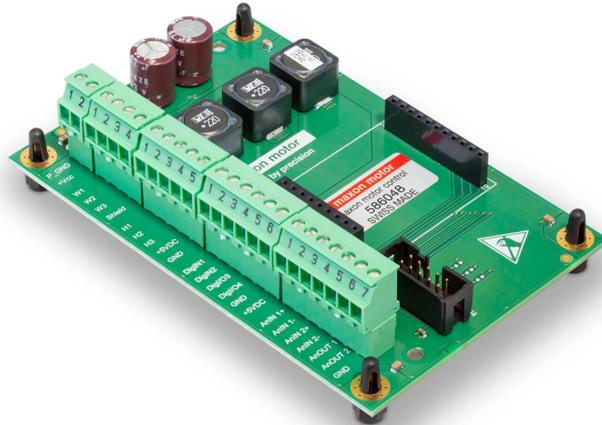

Figure 5-28 ESCON Module 50/8 MoBo

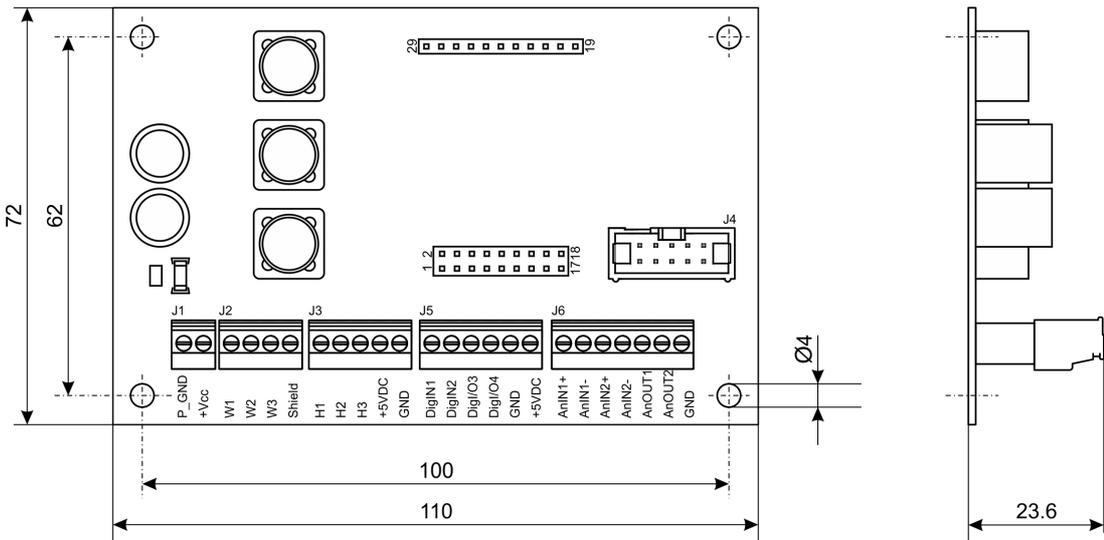

Figure 5-29 ESCON Module 50/8 MoBo – Dimensional Drawing [mm]

5.7.1 Assembly

The ESCON Module 50/8 MoBo is designed to easily be screw-mounted or integrated into standard rail systems. For ordering information for the components required →Figure 5-30 (only for illustrative purposes) and →Table 5-15.

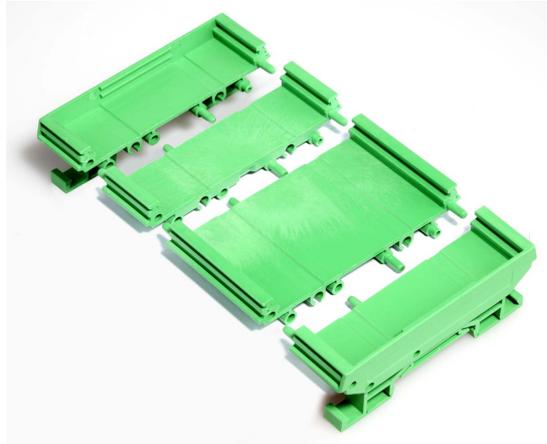

Figure 5-30 ESCON Module 50/8 MoBo – Mounting on DIN Rail

Head B	DIN 41651 connector, 2.54 mm pitch, 10 poles, with strain relief

Table 5-25 ESCON Module 50/8 MoBo – Encoder Cable

Best practice

- Because of its resistance against electrical interferences, **we recommend using differential scheme**. Nevertheless, the controller supports both schemes – differential and single-ended.
- The controller does not require an index impulse (Ch I, Ch II).
- For best performance, **we strongly recommend using encoders with line driver**. Otherwise, speed limitations may apply due to slow switching edges.

5.7.2.5 Digital I/Os (J5)
